ABSTRACT

Data on age distributions for students enrolled in higher education institutions in Missouri for the 1978-79 school year are presented. The majority of students were within the traditional age group for college attendance (21 years of age or younger). This was especially true for the full-time undergraduate student. A substantial number of students were enrolled part-time, and the majority of these students were between 25 and 34 years of age and were enrolled in the state-supported two-year institutions, the independent universities, and the independent two-year institutions. It is suggested that institutional policy-makers will need to be more flexible as consideration is given to the older student. Considerations of scheduling, course offerings, and other student services will require attention. Institutions located in urban areas will perhaps reflect an increase in part-time enrollments since the location of these institutions will enable persons to continue current employment and also to cut college costs by living at home. The extent of part-time enrollments during the next decade will perhaps have the greatest impact on higher education enrollments. (SW)

PREFACE

This report is the sixth in the 1979 Research and Planning Series published by the Missouri Department of Higher Education. The report provides a summary and analyses of age distributions for students enrolled in institutions of higher education within Missouri. The Research and Planning Series is intended to present timely information and analysis for institutional and state-level policymakers in Missouri Higher Education.

A PROFILE OF AGE OF STUDENTS ATTENDING MISSOURI COLLEGES AND UNIVERSITIES, FALL 1978

Introduction

Enrollments at colleges and universities have become the subject of much discussion in higher education and other circles. Much speculation has been made about the future of higher education in terms of growth, stability, and decline in college attendance. One cause for uncertainty in making postsecondary enrollment projections is predicting the number of persons other than the traditional students who will go to college. Many projections for the next 10 to 20 years forecast enrollment declines while others project enrollment stability. The Carnegie Council, for example, predicts that there will be little, if any, decline in overall enrollments based on an assumption of rising enrollment rates for part-time students, non-degree credit students, students older than 22, graduate and first-professional students and women, blacks and other minorities (Centra, 1978). The National Center for Education Statistics (NCES) predicts a total enrollment in higher education of 12.1 million in 1980 and 11.2 million in 1985, a nine percent decrease between 1980 and 1985 (Frankel and Harrison, 1977). Nevertheless, careful consideration of probable future trends, including a known decline in the traditional college-age population, indicates that the unprecedented growth of college enrollments in the 60's will slow down substantially. Obviously, the size of the traditional college-age population will play an important role in the future of postsecondary education enrollment.

In the past, colleges have depended upon the traditional college-age group, 18 through 21, for enrollments, but more recently institutions have experienced some variations in ages among those seeking a college education. Shifting lifestyles, greater longevity and more leisure time are making it possible for more adults to attend college. Women, especially, are attending college in increasing numbers as they seek job skills and resume studies that were interrupted by marriage and family responsibilities. Other adults have been lured into the classroom

as they seek more meaningful use of leisure time. The National Center for Education Statistics reported that the proportion of students 35 years and older reached 10.4 percent in 1974, 10.9 percent in 1975 and 10.7 percent in 1976 (Maeroff, 1978).

This report presents age distributions for students enrolled in institutions of higher education within Missouri in 1978-79. The information for this report was obtained from institutions that completed the survey, MDHE 05-0, Age of Students-Unduplicated Headcount. The MDHE 05-0 reports age and level or classification of students enrolled full and part time. Since this is the first year of the new data collection system, trend data are not available for this first Age of Students report. Trend analysis will be possible in future years and will be valuable to planners and other policymakers assessing the future of enrollments in higher education.

Information that is presented in the subsequent tables does not include data for several institutions. Within the state sector, data provided by the St. Louis Community Colleges were not in the prescribed format and could not be included in the analyses. Within the independent sector, data for Fontbonne, Park, and Cottey colleges and the Missouri Institute of Technology were not available. The absence of these institutions from this report accounts for variations from the headcounts reported in the "Fall Enrollment, 1978" (Research and Planning Series, Report 79-1). Totals reported herein are based only on those institutions that completed MDHE 05-0.

The information that is reported here should be useful to institutional and state-wide policymakers in planning for higher education and the anticipated enrollment changes. Consideration of course offerings, scheduling, housing facilities, and child-care centers will be affected by the age distribution of persons attending Missouri's colleges and universities.

Age of Students Within Missouri Institutions

Institutions included in this report enrolled 168,690 students in fall 1978. (The Fall Enrollment, 1978, report showed 199,374 students). The University of Missouri system enrolled 29.4% of those students reported on MDHE 05-0; state four-year institutions enrolled 30.7% and state two-year institutions enrolled 11.9%. Independent universities enrolled 12.0% of all students enrolled; independent four-year institutions enrolled 13.7% and the independent two-year institutions enrolled less than one percent. The technical and professional institutions enrolled 1.8% of students enrolled in Missouri higher education institutions. Of the total enrolled, more than half, 52.4%, of the students were 21 years old or younger. Students between the ages of 22 and 34 comprised 36.7% of the total enrolled. Students older than 35 years of age comprised almost 11% of the total students enrolled; very close to the proportion over 35 enrolled nation-wide.

The total number of full-time students reported was 116,724 and the total number of part-time students reported was 51,966. Students who were 21 years old or younger represented 68.6% of the total enrolled full time. Persons between the ages of 22 and 34 represented another 27% of the total enrolled full time. Persons 35 and older represented less than five percent of the total enrolled full time. However, among students enrolled part time, persons between the ages of 22 and 44 made up almost three-fourths, 72.3%, of the total enrolled part-time. Persons 45 and older made up 11.7% of those enrolled part-time. In contrast to the 68.6% of full-time enrollments, persons younger than 22 made up about 16% of those enrolled part-time. (This information is presented in Table 1.)

The traditional age range for college attendance has generally been between 18 and 21. The majority of students errolled full-time in the fall of 1978 were in the traditional age cohort. This group of students is generally made up of persons who have entered college immediately upon graduation from high school. Subsequent tables describe age distribution by specific classifications, i.e., first-time-entering freshmen, other undergraduates, etc..

Percent totals may not equal 100 due to rounding.
Information presented in this table does not include data for the St. Louis Community Colleges, Fontbonne, Park, and Cottey Colleges or the Missouri Institute of Technology.

College attendance by non-traditional college-age students becomes much more apparent in part-time enrollments, especially for those between the ages of 25 and 34. Students between the ages of 25 and 34 made up almost 41% of all students enrolled part time, and students 35 and older represented 20% of students enrolled part time. Almost two-thirds of the students enrolled part time were 25 years of age and older. This contrasts sharply with the proportion of students enrolled full time, the majority of whom were between the ages of 18 and 21.

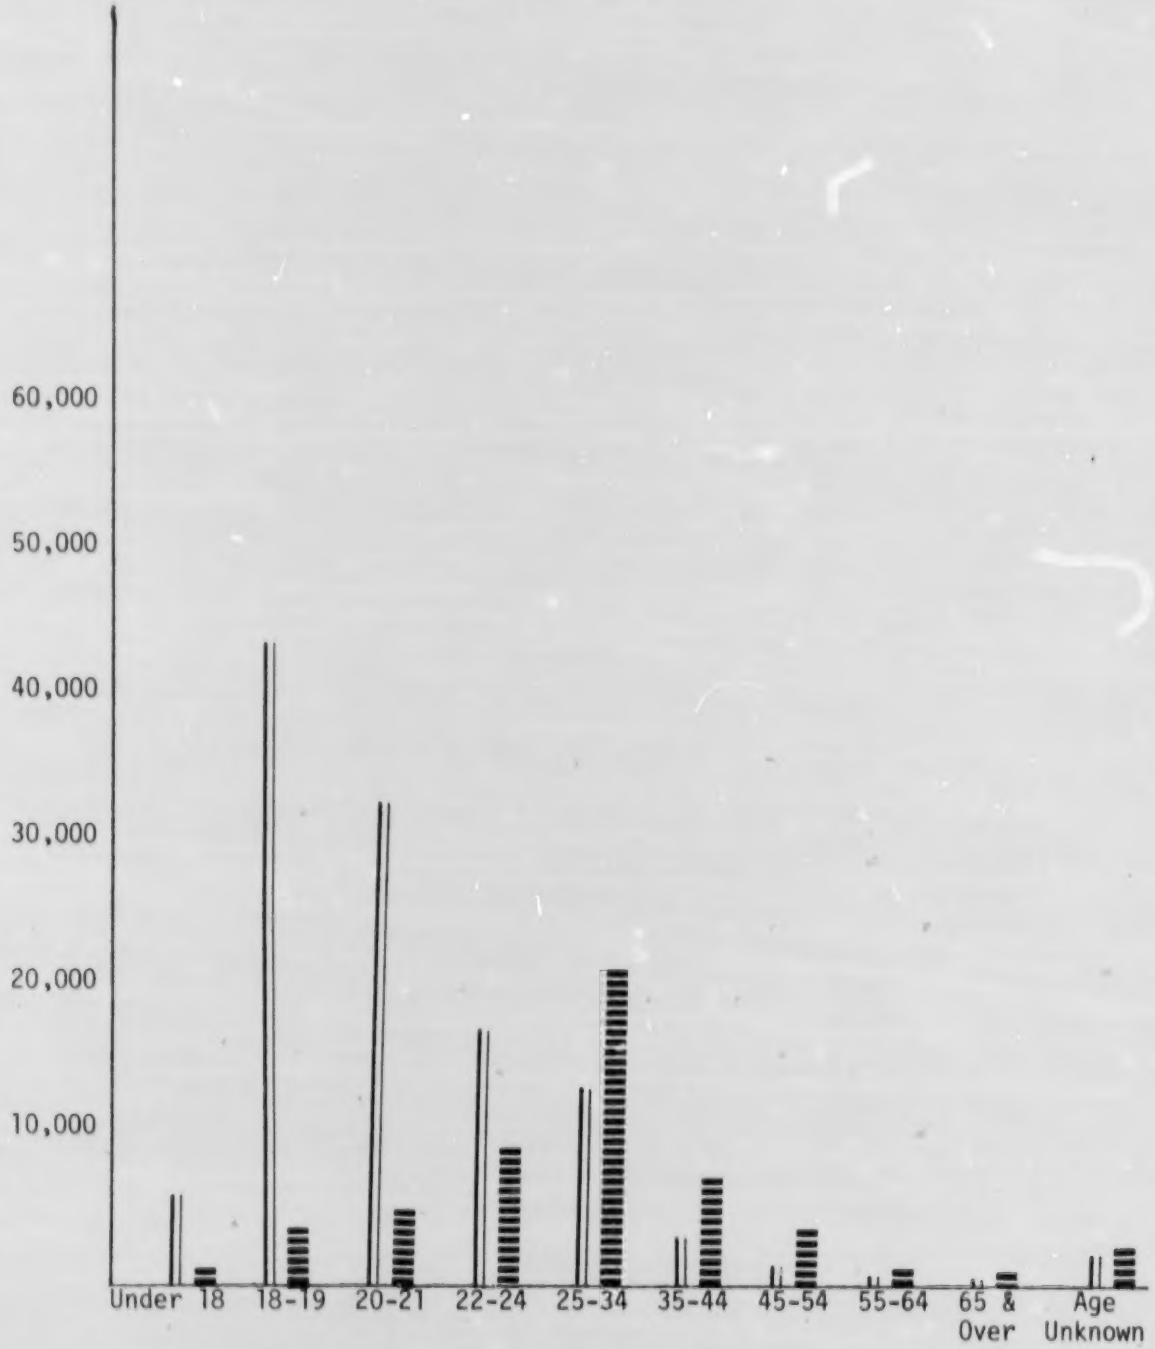
Full- and Part-Time Enrollments by Age Distribution

Figure 1 displays the number of full-time and part-time enrollments by age distribution. It is apparent that full-time enrollment was much more common among persons younger than age 24 and that part-time enrollment was more common among persons 25 years of age and older. Persons within the 25 to 34 age cohort represented the largest portion that were enrolled part time.

Special attention will need to be given to part-time students since many view an increase in part-time enrollments as one possible means of offsetting enrollment declines (Carnegie Council, 1975). Two issues emerge when considering the prospect of attracting older students seeking a college education.

1. Scheduling - Consideration will need to be given to the times that various courses are offered. It is quite probable that the older student is already employed and is seeking additional job skills; consequently, evenings and/or weekends might be the most feasible time to pursue a college education. Likewise, attention will need to be given to the types of courses (required or electives) that are offered at given times for both the degree and non-degree students. Institutions that are located in urban areas are more likely to encounter situations of this nature and will need to make provisions to accommodate these persons.

Figure 1. Full- and Part-Time Enrollments by Age Distribution, 1978



Source: MDHE 05-0, Age of Students-Unduplicated Headcount, 1978

2. Course offerings - As was mentioned above, the types of courses that are offered at given times might be impacted upon by the non-traditional student. Consideration might also be given to the content and format of courses that enroll a large number of older students. That is, the subject matter and structure of an existing course might be appropriate for the 18-21 year old cohort but inappropriate for persons 25 or older. By the same measure, some index for flexibility in awarding credit for life experience to older persons seems appropriate. Some course requirements might be waived based on the individual's employment and background.

Certainly, other factors will need to be considered but revisions in scheduling and course offerings will perhaps make college attendance even more appealing to the non-traditional student.

In addition to the overall importance of the age distributions of part-time enrollments is the extent of part-time enrollments in various institutional sectors. The Carnegie Council (1975) identified several factors that will likely affect enrollments among various institutional types. The Council estimated that increases in part-time students will more likely occur in community colleges and that a declining market for teachers will negatively affect enrollments at universities, the less selective liberal arts colleges, and comprehensive colleges and universities. An increased emphasis on vocational and professional studies is expected to benefit the comprehensive colleges but not the liberal arts colleges.

Other factors identified by the Council were the characteristics of individual institutions, including financial condition, reputation, size and location. Institutions that are financially sound and have established reputations will more easily adjust to enrollment shifts, whereas smaller institutions will be more sensitive to declining enrollments. Institutions located in urban areas will have better opportunities to respond to demands for part-time study and to a commuter population interested in cutting college expenses by living at home.

Information presented in Table 2 shows the percentage of part-time enrollments among the institutional sectors for Missouri colleges and universities. The largest percentages of part-time enrollments occur at the state and independent two-year institutions. (Inclusion of the St. Louis Community Colleges would increase this percentage.) More than half, 59.3%, of the students enrolled in the state two-year institutions are part time and almost half, 47.1%, of those enrolled in the independent two-year institutions are part time. The large numbers of part-time enrollments in these institutions seem to support the premise articulated by the Carnegie Council that community colleges will benefit from part-time enrollments. The "Fall Enrollment, 1978" (Research and Planning Series, 79-1) shows that, between 1974 and 1978, there has been an overall increase in part-time enrollments in Missouri's institutions of higher education.

The Council also indicated that institutions located in urban areas would have better opportunities to respond to demands for part-time study. Missouri's two independent universities are located in the St. Louis metropolitan area and more than one-third, 35.6%, of their students are enrolled part time. This should serve as an indicator to administrators of these institutions that particular attention needs to be given to this group of students in coming years.

The state-supported universities and four-year institutions enroll a smaller percentage of their students on a part-time basis. Students attending these institutions tend to be younger and to be enrolled on a full-time basis more often than students attending institutions discussed above. The same is true for the independent four-year institutions, which tend to enroll primarily resident full-time students.

Students enrolled part time in the technical and professional institutions represent the smallest percentage (three percent) of all part-time students. Not only do these institutions enroll the smallest percentage of part-time students but the majority, 64.6% of students enrolled full time are between the ages of 22 and 34. This large proportion of older full-time students may be attributed to the types of programs offered by these special-purpose institutions.

First-Time-Entering Undergraduate Enrollments

First-time-entering undergraduates are those students entering any college for the first time ever. (This category includes students enrolled in the fall term who entered college for the first time in the prior summer term and students who entered with advanced standing and may actually be classified beyond the freshman level at entry.) Missouri institutions, reported 37,726 first-time-entering undergraduates on MDHE 05-0; 77% were enrolled full time and 23% were enrolled part time. First-time-entering undergraduates represent 22.4% of all students enrolled in Missouri institutions of higher education. (See Table 3.)

The University of Missouri system enrolled 18.4% of all first-time-entering undergraduates; the state four-year institutions enrolled 31% of the total enrolled; and the state two-year institutions enrolled 28% of all first-time-entering undergraduates. Within the independent sector, the universities enrolled 5.9% of all first-time-entering undergraduates. The independent four-year institutions enrolled 15%, and the two-year institutions enrolled one percent. The technical and professional institutions enrolled less than one percent of all first-time-entering undergraduates.

First-time-entering undergraduates are typically between the ages of 18 and 19. In Missouri, students within this age cohort make up almost 71% of first-time-entering students. However, more than 5,000 of the first-time-entering undergraduates in fall 1978 were 25 years of age and older. Students enrolled part-time and classified as first-time-entering undergraduates totaled 8,692. Of that total, 69.7% are enrolled in the state two-year colleges. This high percentage of part-time, first-time-entering enrollment among the state two-year institutions may have a significant impact in planning curricular offerings for the future, especially since almost half, 49.6%, of those enrolled part time are 25 years of age or older.

Other-Undergraduate Enrollments

Other undergraduates include those students classified as sophomores, juniors and seniors. The age range for this group is more likely to vary than is that of first-time-entering students, but typically these students have been between the ages of 19 and 23. On form MDHE-05-0, other undergraduates totaled 97,362 or 57.7% of all students enrolled in Missouri institutions of higher education. Of the total, 75.2% were enrolled full time and 24.8% were enrolled part time; a very similar proportion was reported for first-time-entering undergraduates. (Refer to Table 4.)

Students up to 24 years of age represent 87.7% of other undergraduates enrolled full time. Persons 25 years of age and older represent 11.8% of those enrolled full time; those between the ages of 25 and 34 make up the bulk of this percentage. In contrast, persons 25 years of age and older represent 54.1% of the total enrolled part time. The majority of these students enrolled part time are between the ages of 25 and 44. This group represents 48.2% of all other-undergraduate students enrolled part time.

A large portion of other undergraduates attending the state two-year institutions and the independent universities are enrolled part time. Part-time students make up more than half of all other undergraduates within the state two-year institutions; and 40% within the independent universities. These part-time students are largely not within the traditional college-age group. More than half of the other undergraduates enrolled part time in independent universities are between the ages of 25 and 44. The same is true for students enrolled part time in the state two-year institutions. These large proportions of students beyond the typical age range for college attendance certainly supports the premise that more adults are enrolling in institutions of higher learning, especially in the urban areas. Data for the St. Louis Community Colleges, would be included in these tables and would further support these overall conclusions. Because the majority of these persons are enrolled part

time, special provisions will need to be made in terms of course offerings and scheduling. More than half, 54.1%, of the other-undergraduate students enrolled part time are 25 years of age or older. Persons enrolled full time largely fall within the typical age range for college attendance; 71.7% of other undergraduates enrolled full time are under 18 through 21 years of age.

Unclassified Pre-Baccalaureate Enrollments

This category includes students who have not been formally admitted to an institution to pursue a program of study leading to a degree/diploma or certificate, even though taking courses with regular students. It also includes students who have received an earned baccalaureate degree but have not been accepted by the institution for graduate-level study and are taking undergraduate-level courses (e.g., teachers taking courses for certification).

A total of 5,199 students were categorized as unclassified pre-baccalaureate. Of the total, only 10.4% were enrolled full time and 89.6% were enrolled part time. Of those enrolled part time, 85.5% were 22 years of age and older. Of those enrolled on a full-time basis, 58.3% were within the typical age range for college attendance. More than two-thirds of all unclassified pre-baccalaureate students, full and part time, are 25 or older. (This information is presented in Table 5.)

While almost 90% of the students classified in this category are enrolled on a part-time basis, almost 45 percent of these students are enrolled in the independent four-year institutions. It should also be noted that among these institutions, almost three-fourths, 72.7%, of those enrolled part-time are 25 years of age and older. Overall, 69.9% of the students enrolled part-time and categorized as unclassified pre-baccalaureate are 25 years of age and older.

First-Professional Enrollments

First-professional students are those enrolled in a first-professional degree program such as law, medicine, theology, optometry, etc. These

*Enrollments were not reported in this category for University of Missouri-Rolla, Harris-Stowe, Lincoln, Northeast, Northwest, Southeast, East Central, Metropolitan Colleges, Mineral Area, Moberly and Trenton.

+Enrollments were not reported in this category for Cardinal Newman, Columbia, Fontbonne, Lindenwood, Park, Southwest Baptist, Stephens, and Tarkio.

**Enrollments were not reported in this category for Kansas City College of Osteopathic Medicine, Kirksville College of Osteopathic Medicine, Logan, St. Louis College of Pharmacy.

1Data for the St. Louis Community Colleges could not be used.

2None of the independent two-year institutions reported enrollments in this category.

3Cottey College and Missouri Institute of Technology did not respond to survey.

students are generally older than the traditional college student since most have earned at least a baccalaureate degree. Typically, first-professional students are 22 years of age and older and are usually enrolled full-time. Missouri institutions of higher education enrolled 7,036 first-professional students. Of the total, 98.3% were enrolled full time and more than three-fourths of these (78.5 percent) are 22 years of age and older. More than three-fourths of all students classified as first professional are between 22 and 34 years of age. (Refer to Table 6.)

The University of Missouri system enrolled 36.5% of all first-professional students within the state; the independent universities enrolled 39.7% and the technical and professional institutions enrolled 23.8% of all first-professional students.

Almost half, 48.4%, of the students classified as first professional at the University of Missouri are between 22 and 24 years of age, whereas only 28.9% at the technical and professional institutions are between 22 and 24 years of age. The majority of first-professional students in the latter group of institutions are in the 25-34 age cohort, 60.2%. Thirty-eight percent of the students classified as first professional at the independent universities are between 22 and 24 years of age.

Graduate-Level Enrollments

This category includes all students enrolled for graduate-level study. Students enrolled for master's, specialist, and doctoral degrees, as well as unclassified, post-baccalaureate students, are included. Students enrolled for graduate study are older than the traditional college student since they have completed baccalaureate degrees prior to pursuit of graduate study. More graduate-level students enroll on a part-time basis than do first-professional students and other undergraduates. (This information is presented in Table 7.)

Missouri institutions enrolled 21,316 students at the graduate level. Of the total, 67% were enrolled part time and 33% were enrolled full

time. Two-thirds, 66.5%, of all students enrolled for graduate study were between the ages of 25 and 44.

The University of Missouri enrolled 45.6% of all students enrolled for graduate study and the state four-year institutions enrolled 21.4%. Within the independent sector, the universities enrolled 23.2% and the four-year institutions enrolled 9.8% of all graduate-level students.

Of the students enrolled for graduate study on a full-time basis, 48.2% were enrolled at the University of Missouri and 31.4% attended the independent universities. Of the graduate students enrolled full time at the University of Missouri, 84.4% were between the ages of 22 and 34. Persons within this age group, 22-34, similarly represent 79.5% of all full-time graduate students in the independent universities.

Students enrolled on a part-time basis for graduate study represented 67% of all students enrolled for graduate study. The University of Missouri system enrolled 44.3% of all part-time students enrolled for graduate study; the state four-year institutions enrolled 23.3%. Within the independent sector, the universities reported 19.2% and four-year institutions reported 13.1% of all part-time graduate study enrollment.

It is interesting to note the differences in full- and part-time enrollments among the institutional sectors. The University of Missouri system enrolled 34.8% of their graduate students on a full-time basis and 65.2% on a part-time basis; the state four-year institutions enrolled 26.8% of their students on a full-time basis and 73.2% on a part-time basis. The independent universities have the largest percentage of full-time graduate enrollment; 44.5% are enrolled full time and 55.5% are enrolled part time. The independent four-year institutions enrolled 10.3% of their graduate-level students on a full-time basis and 89.7% part time.

Summary

The purpose of this report was to present base year data on age distributions for students enrolled in institutions of higher education in Missouri. Information was obtained from the Age of Students-Unduplicated Headcount report (MDHE 05-0).

More than half, 52.4%, of the students enrolled in Missouri colleges and universities in 1978 were 21 years of age or younger. These persons make up 68.6% of all students enrolled full time. It appears that a substantial portion of all students enrolled in Missouri colleges and universities is comprised of persons within the traditional age group for college attendance. However, older students were more prevalent among the state-supported two-year institutions, the independent universities, and the technical and professional institutions. More than half of the students enrolled in institutions in each of the other sectors were under 22 years of age.

Part-time students represent 30.8% of all students enrolled in Missouri higher education institutions. The largest portion of these part-time students were within the 25-34 age cohort. Persons within this age group represent almost 41% of all part-time students. The majority of these students were concentrated within the state-supported two-year institutions, the independent universities and the independent two-year institutions. Institutions within these sectors will need to give special attention to planning for older part-time students since they comprise more than a third of all students enrolled. Considerations of scheduling, course offerings and other student services will require attention. Institutions located in urban areas will perhaps reflect an increase in part-time enrollments since the location of these institutions will enable persons to continue current employment and also to cut college costs by living at home. The extent of part-time enrollments during the next decade will perhaps have the greatest impact on higher education enrollments.

In conclusion, the majority of students enrolled in Missouri colleges and universities in 1978 were within the traditional age group for college attendance. This was especially true for the full-time undergraduate student. A substantial number of students were enrolled part time: the majority of these were between 25 and 34 years of age and were enrolled in the state-supported two-year institutions, the independent universities and the independent two-year institutions. Programs of study and/or location of institutions appear to attract the older, part-time students. Institutional policymakers will need to be more flexible as consideration is given to the older student seeking a college education.
